1. Project description

Project authenticity

This project paves streets and upgrades utilities in Miraflores, Huari, to improve infrastructure and quality of life.
The project consists of activity, resource and cost data that were obtained directly from the actual project owner.

2.3. Project Control

2.3.1. Simulated forecasting accuracy

The accuracy of time and cost forecasting methods has been evaluated based on Monte Carlo simulation runs using the risk profiles described in section "2.2. Risk Analysis". Based on these risk profiles, the Mean Absolute Percentage Error (MAPE) and Mean Percentage Error (MPE) has been calculated to evaluate the expected accuracy of the time and cost predictions, EAC(t) and EAC, respectively.

Simulated EAC(t) accuracy		
method - PF	MAPE [%]	MPE [%]
PV - 1	7.1	-4.3
PV - SPI	7.9	0
PV - SCI	7.9	0
ED - 1	7.5	-5.8
ED - SPI	7.9	0
ED - SCI	7.9	0
ES - 1	5.1	-3.2
ES - SPI(t)	7.6	5.6
ES - SCI(t)	7.6	5.6

Simulated EAC accuracy		
method (PF)	MAPE [%]	MPE [%]
1	0	0
CPI	0	0
SPI	3.9	3.9
SPI(t)	6.2	6.2
SCI	3.9	3.9
SCI(t)	6.2	6.2
0.8 CPI + 0.2 SPI	0.9	0.9
0.8 CPI + 0.2 SPI(t)	1.6	1.6

According to the MAPE values[1] the best performance for time forecasting can be expected from the unweighted Earned Schedule method. For cost forecasting the unweighted and CPI-weighted methods should yield the best results.

2.3.2. Tracking description

Tracking authenticity

Manual tracking was performed over 2 tracking periods with a length of approximately 1 month. The Real Duration and Real Cost mentioned in section "2.3.3. Earned Value Management" are based on manual user input.

The tracking information obtained from the project owner and introduced in ProTrack includes actual activity start dates, durations and costs.

[1] The MAPE gives the best indication for the forecast accuracy (the lower the MAPE, the more accurate the method) since all deviations from the targeted real duration (real cost) are cumulated, whereas for the MPE underestimates can be compensated by overestimates and vice versa, possibly leading to an overly positive evaluation of a certain method. However, the MPE can provide useful information about the nature of the deviations, i.e. does the method rather underestimate or overestimate the real duration (real cost)?
